1. Clams 1-71 are presented for examination. Upon further review, claim 56-71 are now rejected under 35 U.S.C. 112 second Paragraph and 35 U.S.C. 101. The reasons will be given below. Claims 1-55 are allowable over the art of record for reciting the connections and the operational details of the memory interface, the memory controller the scalar processing unit and vector processing unit and the input and output coupled to the chip. This is a non-final in order to allow applicant a chance to respond.

2. Claims 56-71 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the components of the executable code which interact with the machine readable medium and the machine.

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 56-71 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The reasons are given below.

4. As to claim 56, claim 56 is reciting a machine readable medium having stored thereon executable code which causes a machine to perform a method in an IC chip (see preamble). However no details of the machine readable medium can be found in the claim. No detailed components of the executable code which interact or interrelated with the components of the machine readable medium can be found in the claim (see "112" rejection above). Therefore, the focus is on whether final result achieved by the machine readable medium is useful, tangible, and concrete. Although the claim body is reciting a method of a data processing system for receiving, examining, performing, no

components of the machine, no components of the machine readable medium, nor the components of the executable code can be found in the claim. Therefore, no clear definitions of the structural and functional interrelationships between the executable code and the machine which permit the executable code's functionality to be realized can be found. And, for this reason, claim 56 presents no substantial practical applicant, and is therefore non-statutory (see also MPEP 2100-17-18)

5. As to dependent claims 57-71, all the claims are directed to the machine readable medium. Since none of the dependent claims includes detailed components of the executable code which interact or interrelated with the components of the machine readable medium, similar analysis can be done to the dependent claims. They are therefore, non-statutory.
